# 2010 NATIONAL LAND TRUST CENSUS REPORT

## SOUTH DAKOTA

### New Report Shows Strong Growth in Land Conservation

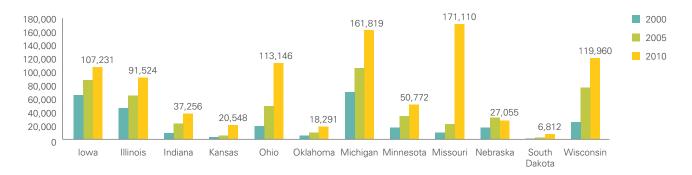

A new report by the Land Trust Alliance shows that land conservation by nonprofit land trusts across the United States is thriving, with more than 10 million acres conserved from 2005 to 2010. Land trusts in South Dakota contributed to this success, reporting an increase of 293% in acres conserved over this period.

The Land Trust Alliance has reported on the status and successes of land trusts since its founding in 1982. The National Land Trust Census measures the pace and quality of the important conservation work of local, state and national land trusts in the United States.

#### South Dakota's Trends in Conservation: 2005–2010

The mission of the Land Trust Alliance is to save the places people love by strengthening land conservation across America. Land trusts are nonprofit organizations that work with private land owners to voluntarily conserve forests, farms, parks, and other cherished places that enrich our lives. We focus our work on three strategic goals: accelerating the pace, improving the quality, and ensuring the permanence of conservation. By building highly effective and well-governed land trusts that protect lands with the highest values to their communities and ensure their protection in perpetuity, we can preserve healthy human and natural communities, clean air and water, beautiful vistas, recreation areas, and working lands.
